

Tensar® InterAx® Geogrids

The Anatomy of Tensar InterAx Geogrid, high performance at its core.

Tensar InterAx geogrid incorporates innovations in both material science and geometry optimisation to provide exceptional performance and value across a wide range of materials and construction applications. This creates the most efficient mechanically stabilised layer (MSL) that retains stiffness over time to enhance performance of access roads, pavements, working platforms, and other on site applications. The result? You get a more cost-effective, higher-performing solution which contributes to saving time, cost and carbon on your project.

Advanced material science

Optimised geometry

Cost effective, resilient trafficked and working surfaces

The unique manufacturing process uses coextrusion to create a multi-layer product, giving Tensar InterAx geogrid the ability to accommodate aggregate nesting. The outer layers conform to the shape of the aggregate and holds it in place.

The open, floating hexagon allows for greater compliance and improved aggregate confinement under compaction and repetitive loading.

Three unique open aperture shapes yields a broader range of sizes and open area, allowing better compatibility with a wider range of aggregate qualities and gradations.

Increased number of bearing surfaces provides improved performance of the geogrid-aggregate layer, by resisting radial displacement of the aggregate under load.

40% higher aspect ratio allows more effective interlock and lateral restraint to aggregate particles enhancing overall MSL performance.

Stabilised

Non-stabilised

Better performance means less aggregate is required to meet project requirements, saving costs, time and carbon emissions.

Tensar InterAx has been used to enhance the performance of roads, railways and other trafficked areas by providing the best Tensar MSL.

It helps to:

- ✓ Improve traffic capacity of roads
- ✓ Improve bearing capacity of MSL
- ✓ Mitigate differential settlement
- ✓ Reduce aggregate thickness whilst maintaining or improving performance
- ✓ Reduce construction costs and time
- ✓ Reduce carbon footprint

Where has Tensar® InterAx® geogrid been used?

/// Road, pavements & trafficked areas

- ✓ Unsurfaced roads
- ✓ Heavy haul roads
- ✓ Flexible pavements
- ✓ Rigid pavements
- ✓ Airport runways
- ✓ Port pavements

/// Working platform

/// Rail trackbed improvement

- ✓ Ballast
- ✓ Sub-ballast

PROVEN SUCCESS

With over 50 years of experience, we've helped construction professionals around the world find cost-effective solutions using our industry-leading geogrid technology. We're with you every step of the way so you find the best solution to your specific challenge.

PROVEN TECHNOLOGY

Tensar geogrid solutions are the most rigorously tested geogrids in the world. Testing includes laboratory evaluations, Accelerated Pavement Testing programs in situ field testing using different materials and loading conditions, 3rd party reviews, and ongoing pavement performance monitoring. The United States Army Corps of Engineers tested Tensar InterAx geogrid against an unstabilised control section. The results showed Tensar InterAx reduced surface rutting by 64%.

PROVEN SAVINGS

We help you deliver projects more efficiently. Tensar InterAx geogrid has already been installed on projects around the world, achieving significant cost and time savings, proven performance, and meeting sustainability goals.

Geofabrics are a supplier of Tensar product solutions in Australia and New Zealand.
